AI & AUTOMATION

- Agentic OS
- RAG (Retrieval-Augmented Generation)
- Vector Databases (Pinecone)
- LangChain
- LlamaIndex
- Model Fine-Tuning (LoRA)
- Prompt Engineering
- Anthropic / OpenAI APIs
- OpenAI

PERFORMANCE & MLOPS

- Rust (kornia-rs)
- Python (PyTorch)
- PyTorch
- Vertex AI
- TensorRT
- Model Drift Detection
- Inference Latency Optimization
- GPU Workload Shaping

CLOUD INFRASTRUCTURE

- GCP (Google Cloud Platform)
- AWS
- Kubernetes (GKE)
- Docker
- Anthos Service Mesh
- Istio
- Argo Workflows
- High Availability (HA)
- Disaster Recovery (DR)

BACKEND & INTEGRATION

- Node.js (NestJS, Fastify)
- TypeScript
- Event-Driven Architecture
- Cloud Pub/Sub
- RESTful APIs
- Semantic APIs
- GraphQL
- PostgreSQL
- Elasticsearch

ADVANCED FRONTEND

- React 19
- Next.js
- Angular
- Webpack Module Federation
- Micro-frontends
- State Management (Redux)

PROFESSIONAL

CHRONICLE

SHIPS IN HARBOR ARE SAFE, BUT THAT'S NOT WHAT SHIPS ARE BUILT FOR!

January 2026 - Present
Ho Chi Minh City, Vietnam

AI-First Solution Architect — Professional Sabbatical

Advanced AI Architecture Specialization

- Consolidated expertise in Enterprise AI Architecture by securing advanced credentials across Google Cloud (Machine Learning Engineer) and Microsoft Azure ecosystems through intensive, lab-based examinations.
- Architected comprehensive RAG pipelines and vector database integrations, establishing standardized Human-in-the-Loop (HITL) safety patterns to govern the secure deployment of enterprise-grade Large Language Models (LLMs).
- Synthesized technological execution with organizational strategy, leveraging AI Transformation frameworks to drive change management and optimize cloud financial operations (FinOps) for autonomous AI deployments.

January 2023 - November 2025
Ho Chi Minh City, Vietnam

CADDi

Senior Full Stack Engineer

- Engineered high-performance machine vision pipelines utilizing Rust and Python (PyTorch, OpenCV) to power patented similarity search algorithms, enabling the real-time geometric analysis of millions of complex manufacturing drawings.
- Designed and maintained robust microservices architecture using Node.js and TypeScript on GCP, orchestrated via Kubernetes and Anthos Service Mesh to ensure fault-tolerant, scalable data extraction from massive enterprise data lakes.
- Optimized inference latency and computational throughput for complex AI models, significantly reducing procurement search times and infrastructure costs through strategic workload shaping and asynchronous processing (Cloud Pub/Sub).
- Executed seamless transition to micro-frontends utilizing Webpack Module Federation, while deploying secure AI context planes with Human-in-the-Loop (HITL) safety Guardrails to ensure responsible enterprise LLM integration.

September 2020 - August 2022
Singapore

Kydon Group

Front End Lead

- Designed and implemented the core front-end architecture for an Agentic Learning OS, orchestrating multi-agent AI systems to dynamically generate personalized learning pathways and real-time skill-matching graphs.
- Engineered secure, low-latency semantic APIs to connect LLM resource schedulers with enterprise knowledge bases, enabling automated, conversational query resolution and just-in-time learning delivery.
- Optimized Event-Driven UI patterns and established an enterprise-wide Design System, reducing development overhead by 30% while ensuring seamless REST API integration for high-availability data flows.

September 2019 - September 2020
Vietnam

Vincere.io

Senior Web Developer

- Architected scalable backend microservices utilizing Node.js and ReactJS for a high-volume recruitment CRM, ensuring seamless data synchronization across candidate pipelines and external APIs without system degradation.
- Led the technical integration of AI-driven parsing and recommendation engines (CoPilot), automating data entry processes and significantly accelerating candidate-to-role matching algorithms.
- Optimized multi-tenant cloud infrastructure and implemented advanced Role-Based Access Control (RBAC) to eliminate disparate legacy architectures, establishing a unified, high-availability platform serving global recruitment professionals.

Core Web Vitals
Optimization

METHODOLOGIES & GOVERNANCE

Agile / Scrum

TDD
Test-Driven Development

CI/CD
Automation

FinOps
Cloud Financial Ops

AI Guardrails

Data Privacy
Compliance (PII)

December 2018 - August 2019
Vietnam

Spirit Labs

Full Stack Engineer

- Spearheaded the engineering of decentralized applications (DApps) and secure wallet integrations utilizing Ethereum and EOS blockchain protocols, ensuring high-throughput transaction processing.
- Developed and audited smart contracts, implementing rigorous security mitigation strategies to protect distributed ledgers against unauthorized access and transactional vulnerabilities.
- Bridged Web3 backend infrastructure with modern Web2 interfaces, utilizing React Native and Node.js to deliver seamless, low-latency mobile and web applications while maintaining zero-regression deployment cycles via strict TDD.

August 2017 - December 2018
Vietnam

ekino Vietnam

Frontend Developer

- Architected responsive, high-performance single-page applications (SPAs) utilizing ReactJS and AngularJS, integrating with complex backend microservices via RESTful APIs for global enterprise clients.
- Optimized front-end rendering pathways and implemented aggressive caching strategies, significantly reducing page load latency and improving end-user engagement metrics across omnichannel platforms.
- Collaborated within Agile delivery pods to implement CI/CD pipelines, automating testing and deployment processes to ensure zero-downtime releases for high-traffic media and e-commerce applications.

April 2016 - August 2017
Vietnam

Ministry of Natural Resources and Environment

Junior Web Developer

- Engineered the structural foundation for the Multi-Purpose Land Information System (MPLIS), migrating unstructured physical registries into a centralized relational database serving provincial administrative nodes.
- Designed complex querying schemas to support multidimensional demographic tracking, enabling automated statistical reporting and reducing manual record analysis time.
- Contributed to national e-government interoperability standards by developing secure data-sharing protocols between localized provincial networks and the central ministry data center.

CREDENTIALS & ACADEMIC

Carnegie Mellon University
Joint Program with Van Lang University
Bachelor of Engineering, Computer Software Engineering (2010 - 2016)

Certifications

Claude Certified Architect – Foundations Certification
ANTHROPIC EDUCATION

AI Workplace Proficiency Certification
SUPERHUMAN

Microsoft Certified: Agentic AI Business Solutions Architect
MICROSOFT

Microsoft Certified: Dynamics 365 Business Central Functional Consultant Associate
MICROSOFT

Microsoft Certified: Fabric Analytics Engineer Associate
MICROSOFT

Microsoft Certified: AI Transformation Leader
MICROSOFT

Google Certified Educator Level 2
